[Why Highcharts?](#)

[Highcharts and JavaScript frameworks](#)

[Presentation](#)

[License](#)

[Simple API model](#)

[Documentations](#)

[Openness \(feature request with user voice\)](#)

[Highcharts – a quick tutorial](#)

[Directory structure](#)

[Summary](#)

[2. Highcharts Configurations](#)

[Configuration structure](#)

[Understanding Highcharts' layout](#)

[Chart margins and spacing settings](#)

[Chart label properties](#)

[Title and subtitle alignments](#)

[Legend alignment](#)

[Axis title alignment](#)

[Credits alignment](#)

[Experimenting with an automatic layout](#)

[Experimenting with a fixed layout](#)

[Framing the chart with axes](#)

[Accessing the axis data type](#)

[Adjusting intervals and background](#)

[Using plot lines and plot bands](#)

[Extending to multiple axes](#)

[Revisiting the series config](#)

[Exploring PlotOptions](#)

[Styling tooltips](#)

[Formatting tooltips in HTML](#)

[Using the callback handler](#)

[Applying a multiple-series tooltip](#)

[Animating charts](#)

[Expanding colors with gradients](#)

[Zooming data with the drilldown feature](#)

[Summary](#)

[3. Line, Area, and Scatter Charts](#)

[Introducing line charts](#)

[Extending to multiple-series line charts](#)

[Highlighting negative values and raising the base level](#)

[Sketching an area chart](#)

[Mixing line and area series](#)

[Simulating a projection chart](#)

[Contrasting a spline with a step line](#)

[Extending to the stacked area chart](#)

[Plotting charts with missing data](#)

[Combining the scatter and area series](#)

[Polishing a chart with an artistic style](#)

[Summary](#)

[4. Bar and Column Charts](#)

[Introducing column charts](#)

[Overlapped column chart](#)

[Stacking and grouping a column chart](#)

- [Mixing the stacked and single columns](#)
 - [Comparing the columns in stacked percentages](#)
 - [Adjusting column colors and data labels](#)
- [Introducing bar charts](#)
 - [Giving the bar chart a simpler look](#)
- [Constructing a mirror chart](#)
 - [Extending to a stacked mirror chart](#)
- [Converting a single bar chart into a horizontal gauge chart](#)
- [Sticking the charts together](#)
- [Summary](#)
- [5. Pie Charts](#)
 - [Understanding the relationship between chart, pie, and series](#)
 - [Plotting simple pie charts – single series](#)
 - [Configuring the pie with sliced off sections](#)
 - [Applying a legend to a pie chart](#)
 - [Plotting multiple pies in a chart – multiple series](#)
 - [Preparing a donut chart – multiple series](#)
 - [Building a chart with multiple series types](#)
 - [Creating a stock picking wheel](#)
 - [Understanding startAngle and endAngle](#)
 - [Creating slices for share symbols](#)
 - [Creating shapes with Highcharts' renderer](#)
 - [Summary](#)
- [6. Gauge, Polar, and Range Charts](#)
 - [Loading gauge, polar, and range charts](#)
 - [Plotting a speedometer gauge chart](#)
 - [Plotting a twin dials chart – a Fiat 500 speedometer](#)
 - [Plotting a gauge chart pane](#)
 - [Setting pane backgrounds](#)
 - [Managing axes with different scales](#)
 - [Extending to multiple panes](#)
 - [Gauge series – dial and pivot](#)
 - [Polishing the chart with fonts and colors](#)
 - [Plotting the solid gauge chart](#)
 - [Converting a spline chart to a polar/radar chart](#)
 - [Plotting range charts with market index data](#)
 - [Using a radial gradient on a gauge chart](#)
 - [Summary](#)
- [7. Bubble, Box Plot, and Error Bar Charts](#)
 - [The bubble chart](#)
 - [Understanding how the bubble size is determined](#)
 - [Reproducing a real-life chart](#)
 - [Understanding the box plot chart](#)
 - [Plotting the box plot chart](#)
 - [Making sense with the box plot data](#)
 - [The box plot tooltip](#)

[The error bar chart](#)

[Summary](#)

[8. Waterfall, Funnel, Pyramid, and Heatmap Charts](#)

[Constructing a waterfall chart](#)

[Making a horizontal waterfall chart](#)

[Constructing a funnel chart](#)

[Joining both waterfall and funnel charts](#)

[Plotting a commercial pyramid chart](#)

[Plotting an advanced pyramid chart](#)

[Exploring a heatmap chart with inflation data](#)

[Experimenting with dataClasses and nullColor options in a heatmap](#)

[Summary](#)

[9. 3D Charts](#)

[What a Highcharts 3D chart is and isn't](#)

[Experimenting with 3D chart orientation](#)

[Alpha and beta orientations](#)

[The depth and view distance](#)

[Configuring the 3D chart background](#)

[Plotting the column, pie, donut, and scatter series in 3D charts](#)

[3D columns in stacked and multiple series](#)

[Column depth and Z-padding](#)

[Plotting the infographic 3D columns chart](#)

[Plotting 3D pie and donut charts](#)

[The 3D scatter plot](#)

[Navigating with 3D charts](#)

[Drilldown 3D charts](#)

[Click and drag 3D charts](#)

[Mousewheel scroll and view distance](#)

[Summary](#)

[10. Highcharts APIs](#)

[Understanding the Highcharts class model](#)

[Highcharts constructor – Highcharts.Chart](#)

[Navigating through Highcharts components](#)

[Using the object hierarchy](#)

[Using the Chart.get method](#)

[Using both the object hierarchy and the Chart.get method](#)

[Using the Highcharts APIs](#)

[Chart configurations](#)

[Getting data in Ajax and displaying a new series with Chart.addSeries](#)

[Displaying multiple series with simultaneous Ajax calls](#)

[Extracting SVG data with Chart.getSVG](#)

[Selecting data points and adding plot lines](#)

[Using Axis.getExtremes and Axis.addPlotLine](#)

[Using the Chart.getSelectedPoints and Chart.renderer methods](#)

[Exploring series update](#)

[Continuous series update](#)

[Testing the performance of various Highcharts methods](#)

[Applying a new set of data with Series.setData](#)

[Using Series.remove and Chart.addSeries to reinsert series with new data](#)

[Updating data points with Point.update](#)

[Removing and adding data points with Point.remove and Series.addPoint](#)

[Exploring SVG animation performance on browsers](#)

[Comparing Highcharts' performance on large datasets](#)

[Summary](#)

[11. Highcharts Events](#)

[Introducing Highcharts events](#)

[Portfolio history example](#)

[The top-level chart](#)

[Constructing the series configuration for a top-level chart](#)

[Launching an Ajax query with the chart load event](#)

[Activating the user interface with the chart redraw event](#)

[Selecting and unselecting a data point with the point select and unselect](#)

[events](#)

[Zooming the selected area with the chart selection event](#)

[The detail chart](#)

[Constructing the series configuration for the detail chart](#)

[Hovering over a data point with the mouseover and mouseout point events](#)

[Applying the chart click event](#)

[Changing the mouse cursor over plot lines with the mouseover event](#)

[Setting up a plot line action with the click event](#)

[Stock growth chart example](#)

[Plotting averaging series from displayed stock series](#)

[Launching a dialog with the series click event](#)

[Launching a pie chart with the series checkboxClick event](#)

[Editing the pie chart's slice with the data point's click, update, and remove](#)

[events](#)

[Summary](#)

[12. Highcharts and jQuery Mobile](#)

[A short introduction to jQuery Mobile](#)

[Understanding mobile page structure](#)

[Understanding page initialization](#)

[Linking between mobile pages](#)

[Highcharts in touch-screen environments](#)

[Integrating Highcharts and jQuery Mobile using an Olympic medals table application](#)

[Loading up the gold medals page](#)

[Detecting device properties](#)

[Plotting a Highcharts chart on a mobile device](#)

[Switching graph options with the jQuery Mobile dialog box](#)

[Changing the graph presentation with a swipeleft motion event](#)

[Switching the graph orientation with the orientationchange event](#)

[Drilling down for data with the point click event](#)

[Building a dynamic content dialog with the point click event](#)
[Applying the gesturechange \(pinch actions\) event to a pie chart](#)
[Summary](#)

[13. Highcharts and Ext JS](#)

[A short introduction to Sencha Ext JS](#)

[A quick tour of Ext JS components](#)

[Implementing and loading Ext JS code](#)

[Creating and accessing Ext JS components](#)

[Using layout and viewport](#)

[Panel](#)

[GridPanel](#)

[FormPanel](#)

[TabPanel](#)

[Window](#)

[Ajax](#)

[Store and JsonStore](#)

[Example of using JsonStore and GridPanel](#)

[The Highcharts extension](#)

[Step 1 – removing some of the Highcharts options](#)

[Step 2 – converting to a Highcharts extension configuration](#)

[Step 3 – constructing a series option by mapping the JsonStore data model](#)

[Step 4 – creating the Highcharts extension](#)

[Passing series-specific options in the Highcharts extension](#)

[Converting a data model into a Highcharts series](#)

[X-axis category data and y-axis numerical values](#)

[Numerical values for both x and y axes](#)

[Performing preprocessing from store data](#)

[Plotting pie charts](#)

[Plotting donut charts](#)

[Module APIs](#)

[addSeries](#)

[removeSerie and removeAllSeries](#)

[setTitle and setSubTitle](#)

[draw](#)

[Event handling and export modules](#)

[Extending the example with Highcharts](#)

[Displaying a context menu by clicking on a data point](#)

[A commercial RIA with Highcharts – Profiler](#)

[Summary](#)

[14. Server-side Highcharts](#)

[Running Highcharts on the server side](#)

[Highcharts on the server side](#)

[Batik – an SVG toolkit](#)

[PhantomJS \(headless webkit\)](#)

[Creating a simple PhantomJS script](#)

[Creating our own server-side Highcharts script](#)

[Running the Highcharts server script](#)

[Server script usage](#)

[Running the script as a standalone command](#)

[Running the script as a listening server](#)

[Passing options to the listening server](#)

[Summary](#)

[15. Highcharts Online Services and Plugins](#)

[Highcharts export server – export.highcharts.com](#)

[Highcharts Cloud Service](#)

[Highcharts plugins](#)

[The regression plot plugin](#)

[The draggable points plugin](#)

[Creating a new effect by combining plugins](#)

[Guidelines for creating a plugin](#)

[Implementing the plugin within a self-invoking anonymous function](#)

[Using Highcharts.wrap to extend existing functions](#)

[Using a prototype to expose a plugin method](#)

[Defining a new event handler](#)

[Summary](#)

[Index](#)

About the Author

Joe Kuan was born in Hong Kong and continued his education in the UK from secondary school to university. He studied computer science at the University of Southampton for his BSc and PhD. After finishing his education, he worked with different technologies and industries in the UK. Currently, he is working for iTrinegy—a company specializing in network emulation, profiling, and performance monitoring. He enjoys working on a variety of projects and applying different programming languages. Part of his role is to develop frontend data and present complex network data in stylish and interactive charts. He has adopted Highcharts in his company products since the early version 2. Since then, he has been contributing blogs (joekuan.wordpress.com) and software (joekuan.org) on Highcharts, Highstocks, and Highmaps. In December 2012, he published his first book, *Learning Highcharts*, Packt Publishing, which is a comprehensive book on Highcharts covering tutorials, examples, tricks, and tips.

Acknowledgments

When I wrote my first ever book, it was a draining 9 months to grind through alongside my demanding work and spending little time with my family. A year later, Packt Publishing approached me to write the second edition. I was in two minds about going through the hectic schedule again. Since then, Highcharts has become a more complete and improved product and it would be a closure for me to see the book end the same way. The first edition was tough but the new experience kept me motivated towards the goal. This journey has taught me one thing: what it takes and means to keep up the level of momentum.

I would like to dedicate this book to my eldest sister, Valamie, who is courageously fighting cancer. Although she is small, we call her "big sister." She never complains and always puts the interests of other people, especially our parents, above her own, despite what she is going through. Special thanks to my wife for her support and patience again and my boy, Ivan, for understanding why his dad has been glued to the computer all this time.

I would also like to thank Adrian Raposo from Packt Publishing for putting up with me and injecting new spark into this book.

"Be studious in your profession, and you will be learned. Be industrious and frugal, and you will be rich. Be sober and temperate, and you will be healthy. Be in general virtuous, and you will be happy. At least you will, by such conduct, stand the test."

--Benjamin Franklin

About the Reviewers

Philip Arad is a web architect and a frontend developer who works mainly on enterprise large scale applications. He has more than 10 years of experience in user interface design and UI infrastructures on the web platform, using mainly Sencha and Highcharts. Nowadays, Philip designs the UI architecture for the SolarEdge monitoring portal and its administration web applications. He is responsible for the integration of technologies, information, and business processes for the Web and the mobile platforms of the company.

You can see his work at <http://monitoring.solaredge.com>.

Zhang Bo is a web developer with 6 years of experience on PHP. He currently works as an R and D Engineer at NSFOCUS (<http://www.nsfocus.com>), leading development work of a new version of the next-generation firewall product. Zhang has a strong background in using Highcharts to visually present network traffic and security. He is also a qualified professional in the web security field. Apart from work, he enjoys spending time on his interests of travel, gourmet, and photography.

Katherine Y. Chuang is a software engineer and data scientist based in New York. She obtained her PhD in interactive design and worked on interactive data visualizations for decision support systems used in clinical care. Now she works for a consulting company that creates software that helps users quickly model large datasets and automated analytics reporting. In her free time, she organizes open source tech events for communities in NYC and scientific conferences.

Rémi Lepage is a freelance software engineer and a computer science technical trainer.

He holds a master's degree in computer science from Supinfo and the ZCE (Zend Certified Engineer) PHP 5.3 certification.

Specializing in web application development and database administration, he has created several management intranets. He currently creates enterprise applications.

Jon Arild Nygård is a web developer whose prime focus and interest is frontend development. He especially appreciates all the endless possibilities the JavaScript libraries offer. Currently, he is employed at Highsoft, where he thrives and enjoys the support of his great colleagues. In his spare time, he likes to exercise, work on his all too many personal projects, and spend time with friends and family.

You can follow him at his Twitter profile: [@JonANYgaard](https://twitter.com/JonANYgaard).

Do you need instant solutions to your IT questions? PacktLib is Packt's online digital book library. Here, you can search, access, and read Packt's entire library of books.

Why subscribe?

- Fully searchable across every book published by Packt
- Copy and paste, print, and bookmark content
- On demand and accessible via a web browser

Free access for Packt account holders

If you have an account with Packt at www.PacktPub.com, you can use this to access PacktLib today and view 9 entirely free books. Simply use your login credentials for immediate access.

Preface

Learning Highcharts 4 aims to be the missing manual for Highcharts from every angle. It is written for web developers who would like to learn about Highcharts. This book has the following features:

- It is a step-by-step guide on building presentable charts from basic looking ones
- There are plenty of examples with real data covering all the Highcharts series types—line/spline, column, pie, donut, scatter, bubble, area range, column range, gauge, solid gauge, pyramid, box plot, spider, waterfall, funnel, error bar, heatmaps, and 3D charts
- Subject areas are included that haven't yet been covered in online reference manuals and demos, such as chart layout structure, color shading, and in-depth explanations of some specific options such as `sizeBy` in the bubble series, `groupZPadding` in the column series, and how to modify or create plugins
- Applications demonstrating how to create dynamic and interactive charts using Highcharts APIs and events handling are covered
- Applications demonstrating how to integrate Highcharts with a mobile framework such as jQuery Mobile and a Rich Internet Application framework such as Ext JS are also covered
- Applications demonstrating how to run Highcharts on the server side for automating charts generation and exporting their graphical outputs are also covered
- Using the latest online service Highcharts Cloud, you'll learn to embed the graphs into documents
- You'll also learn the structure of Highcharts plugins and how to create plugins

This book is not a reference manual as the Highcharts team has already done an excellent job in providing a comprehensive online reference, and each configuration is coupled with jsFiddle demos. This book also does not aim to be a chart design guide nor a tutorial on programming design with Highcharts.

In short, this book shows you what you can do with Highcharts.

What this book covers

The second edition includes four new chapters, a rewritten chapter, and new sections in some of the existing chapters. All the contents from the previous edition have been technically revised. As a result, the new edition consists of about 50 percent new material.

As this book contains a myriad of examples, it would be impractical to include all the source code of each example. For step-by-step tutorials, the code is listed incrementally. If you want to experiment with the sample code, you are strongly recommended to download the code from the Packt Publishing website or visit http://joekuan.org/Learning_Highcharts for online demos.

[Chapter 1](#), *Web Charts*, describes how web charts have been done since the birth of HTML to the latest HTML5 standard with SVG and canvas technologies. This chapter also provides a short survey of charting software on the market using the HTML5 standard and discusses why Highcharts is a better product than others.

[Chapter 2](#), *Highcharts Configurations*, covers the common configuration options in chart components with plenty of examples and explains how the chart layout works.

[Chapter 3](#), *Line, Area, and Scatter Charts*, demonstrates plotting a simple line, area charts, and scatter charts to plotting a poster-like chart including all three series types.

[Chapter 4](#), *Bar and Column Charts*, demonstrates bar and column charts as well as various derived charts such as a stacked chart, percentage chart, mirror chart, group chart, overlap chart, mirror stacked chart, and horizontal gauge chart.

[Chapter 5](#), *Pie Charts*, demonstrates how to build various charts, from a simple pie chart to a multiseried chart, such as multiple pies in a chart and a concentric rings pie chart, that is, a donut chart. The chapter also explores how to create an open donut chart with specific options.

[Chapter 6](#), *Gauge, Polar, and Range Charts*, is a step-by-step guide on constructing a twin dial speedometer and the creation of a simple solid gauge chart. It also demonstrates the polar chart's characteristics and its similarity to a Cartesian chart. It also illustrates the use of range data on area and column range charts.

[Chapter 7](#), *Bubble, Box Plot, and Error Bar Charts*, explains the characteristics of bubble charts and their specific options. The chapter establishes a gradual approach on creating a bubble chart similar to a real life sport chart, applies the same exercise to a box plot with environmental data, and provides a tutorial on error bar charts using racing data.

[Chapter 8](#), *Waterfall, Funnel, Pyramid, and Heatmap Charts*, illustrates how to configure waterfall and funnel charts and uses the drilldown feature to link both charts.

Then there is a tutorial on pyramid charts and reconstructing them from a financial brochure. Then, heatmap charts are introduced and different outputs are shown by experiencing a number of series options.

[Chapter 9](#), *3D Charts*, discusses what 3D charts in Highcharts really means and demonstrates the concept of 3D charts, such as column, pie, and scatter series. It illustrates specific 3D options with experiments and reconstructs a 3D chart from infographics. The chapter also covers how to create interactive 3D orientations with mouse actions.

[Chapter 10](#), *Highcharts APIs*, explains the usage of Highcharts APIs and illustrates this by using a stock market demo to draw dynamic charts. The chapter discusses the use of different methods to update the series and analyzes the performance of each method on various browsers, as well as the scalability of Highcharts.

[Chapter 11](#), *Highcharts Events*, explains Highcharts events and demonstrates them through various user interactions with charts from the portfolio application demos.

[Chapter 12](#), *Highcharts and jQuery Mobile*, is a short tutorial on the jQuery Mobile framework and demonstrates how to integrate it with Highcharts by creating a mobile web application browsing an Olympic medals table. The chapter also covers the use of touch-based and rotate events with Highcharts.

[Chapter 13](#), *Highcharts and Ext JS*, is a short introduction to Sencha's Ext JS and describes the components likely to be used in an application with Highcharts. It also shows how to use a module and a Highcharts extension in order to plot Highcharts graphs within an Ext JS application.

[Chapter 14](#), *Server-side Highcharts*, discusses how Highcharts' server-side solution has evolved using PhantomJS. A quick introduction of PhantomJS is given and a step-by-step experiment is conducted to create a server-side solution using Highcharts. The chapter also demonstrates how to use the Highcharts official server-side script.

[Chapter 15](#), *Highcharts Online Services and Plugins*, is a quick introduction to the export server service and discusses a recent significant cloud development: Highcharts Cloud. The chapter gives you a tour of what it offers and how to use it, from a basic level without any prior knowledge of Highcharts and JavaScript programming to an advanced user level. The chapter also demonstrates the structure of plugins and shows you how to combine multiple plugins to create a new user experience.

What you need for this book

Readers are expected to have basic knowledge of web development in the following areas:

- The structure of a HTML document and its syntax
- Ajax

As this book is all about Highcharts, which is developed in JavaScript, readers should be comfortable with the language at an intermediate level. Some of the examples use jQuery as a quick way to access document elements and bind methods to events. Hence, a basic knowledge of jQuery should be sufficient. Some knowledge of jQuery UI would also be an advantage, as it is lightly used in [Chapter 10](#), *Highcharts APIs* and [Chapter 11](#), *Highcharts Events*.
